

a

Five-gate attrition

126 axes; donor leave-one-out removed none

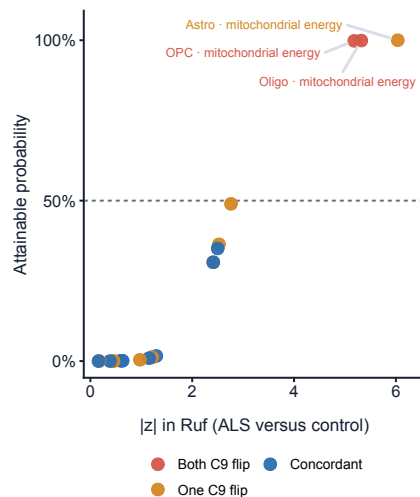

First failures: G1 61; G3 2; G4 8; G5 15.

b

Three-cohort gate attainability

Median 1.2%; 3/21 axes exceed 50%, all direction-flipped

c

Perturbation-pathology alignment

Two TDP-43-loss lines; 6/6 glial correlations

	GSE296710 Zanovello	GSE296714 Humphrey
Excitatory N	0.35	0.12
Microglia	-0.32	-0.27
Inhibitory N	-0.43	-0.40
OPC	-0.70*	-0.51*
Oligodendrocyte	-0.62*	-0.45
Astrocyte	-0.51*	-0.24

d

Chaperone-arm response to TDP-43 loss

Knockdown versus control; colour denotes dataset

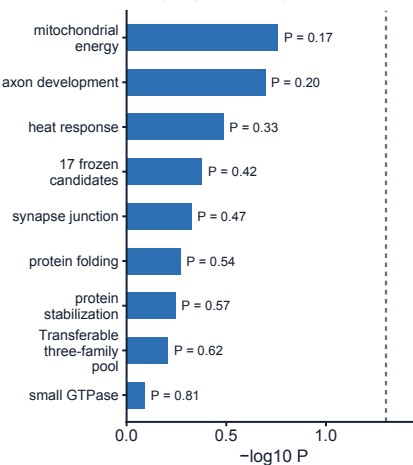

■ GSE296710 ■ GSE296714 ■ not significant ■ FDR < 0.05

e

ALS GWAS programme-set tests

Nine prespecified competitive tests; none passes $P < 0.05$

f

Candidate-gene ALS association

17 candidates; Bonferroni: MAPT only
